

Dxf to Pdf Configuration

The DXF-to-PDF conversion functionality can be enabled or disabled using the `DXF_PDF_CONVERSION_ENABLED` key in the `eg_appconfig` table.

- **TRUE** – Enables the DXF-to-PDF conversion process.
- **FALSE** – Disables the conversion process. When disabled, no DXF-to-PDF conversion will be performed.

Once the feature is enabled, the system supports two processing engines for DXF-to-PDF conversion: Aspose and Kabeja. The engine selection is controlled through the `DXF_TO_PDF_ENGINE` key in the `eg_appconfig` table. The supported values are:

- **ASPOSE** – Uses the Aspose implementation for DXF-to-PDF conversion.
- **KABEJA** – Uses the Kabeja-based implementation for DXF-to-PDF conversion.

The Aspose implementation generates a single PDF output from the input DXF file.

For the Kabeja implementation, two processing modes are supported:

1. **Legacy Kabeja Flow**

The legacy implementation generates multiple PDF files based on configured DXF layers.

2. **New Kabeja Flow**

The new implementation generates a single PDF output from the DXF file.

The behavior between the legacy and new Kabeja implementations is controlled using the `DXF_TO_PDF_USE_LEGACY_LAYER_SHEETS` key in the `eg_appconfig` table:

- **YES** – Executes the legacy Kabeja flow, generating multiple PDFs for different layers.
- **NO** – Executes the new Kabeja flow, generating a single PDF from the DXF file.

The configuration for the legacy Kabeja multi-PDF generation process is maintained in the `EDCR_DXF_PDF` key. This configuration defines the layer-based settings used while generating separate PDF files for different DXF layers.
